CASE STUDY

Audiovisual Installations

A privately owned insurance broker was refurbishing their meeting/conference room and wanted to take the opportunity to install a plasma screen with network and external input capabilities.

Amber had previously carried out electrical installation works for the business, and was invited to submit costings for the electrical and audiovisual works relating to this project. The site was surveyed, specification and quote submitted to meet requirements followed by the awarding of the contract.

The installation consisted of a 50" plasma screen on flat tilt wall bracket located within a bookcase opening. Picture and sound inputs were provided via three sources:

1. VGA input plate located to rear of room to facilitate use of laptop for presentations.
2. Interlink to base unit located within cupboard underneath providing connection to customer network/server enabling ease of visualisation of spreadsheets and data when compiling business profiles.
3. RF connection for use as standard TV unit.

The completed works were carried out in a sympathetic manner to avoid damage and unsightly cables or trunking to existing Victorian features within the building.

Upon completion the system was explained to the customer complete with operational test.

The business has found the new facility to be a great success with clients and staff in terms of presentations and training seminars.
