Commercial Installations

Commercial installations cover a wide variety of situations. Below are a few chosen examples Amber has carried out.

3-Phase fuseboards

A property consisted of many sub-main positions in an unsatisfactory condition. The scope of works entailed replacing cables with SWA style and connecting to one mains position proving single means of isolation.

External lighting

A lighting system was installed to a stable block with pvc cables drawn into high impact conduit to give mechanical protection.

Internal lighting

During a restaurant refurbishment a revised lighting scheme was installed featuring recessed down lighters, and custom decorative lanterns to retain the character of the building.

Emergency lighting

A factory unit was required to provide emergency illumination for escape purposes in the event of a lighting failure. Taking into account the construction of the building, high-level spotlights were installed to illuminate walkways with standard exit legends located above exit doors.

Fault finding

A leisure complex suffered a lighting failure to an external car park area. A series of tests were carried out to the underground cables and light columns to locate the fault. The defective section of cable was removed and a new section installed allowing the circuit to be connected.
